Click OK. 5. Close the dialog box. Recent Reviews: Reviews: Featured I love that you can make these extensions. I have used a lot of software to date. I do not use Windows any more so many of my software options have dried up. I use Linux. I have noticed that many applications (Python especially) that I use regularly seem to only work on Windows. I thought it would be good to get a list of software and how to install them. I am a developer by trade. I think this is good information to pass on. What's New In?

This is a simple Autocad plugin developed to assist you in creating autocad models with incrementing attribute numbers (a.k.a as "inserts"). The most common use of this plugin is to create a list of inputs or wire elements (tabs, frames, wires and dimensions). The project is available as a ready to use zip file. Just unzip and install it as an existing plug-in. You can also develop your own customised plug-ins as follows: - Create a new plugin, using the instructions given in README file. - Specify the extension for the plugin in the project properties (see below for more details). You can download the project from github and give it a try. You can also learn more about the project by reading the project's documentation. Project Documentation: Extension's project documentation is available in README file. You can also find the documentation in the site of the plugin's author. This project was originally developed by Alex Zabala at The plugin may be found at www.zabala.eu. Please send any feedback to: alex.zabala@outlook.com. The plugin contains a built-in command named Ctrl+P. This command is only available after installing the plugin. You can define the plugin's properties from the project properties as follows: - Project > Options > Plugin tab > Change the "Extension for the plugin" field to "VLX" and change the "Command" field to "Ctrl+P". - Use the Options-Control-Commands to define the command's shortcuts (in addition to the Ctrl+P) This plugin does not require any other plugins, but of course you may use other plugins of your choice. Installation Installation is done through the existing Autocad's plugin manager and is also done in two steps: - Add the extension (if not already done) - Define the plugin's properties (optional). To add the extension: - Go to Plugins > Plugin Manager - Navigate to "Extension" tab - Click the "Add" button to add the extension (if not already done) - After clicking the "Add" button, the extension will be added to the list of plug-ins To define the plugin's properties: - Open the Options > Plugin tab > Choose the plugin you want to add, then the command you want to add and click the "Change" button. A new field called "Command" will appear, in this field enter the command's
